

4 architectures $\times$ 3 seeds

Four domains

SDNET2018
bridge decks,
pavements, walls
(56,092 patches)

METU
campus buildings
(40,000 patches)

Exact-duplicate
removal
(MD5, within and
across domains)

Balanced
subsample
2000 crack +
2000 no-crack
per domain

Split 70/15/15
(test: 300 + 300)
photo-grouped
split as
sensitivity check

Fine-tuning on one
source domain:
baseline,
aggressive
augmentation,
histogram
equalization,
random rescaling

Linear probe,
frozen ImageNet
features

Three sources,
leave one
domain out
(2800 training
images)

Test on all four
domains: 4×4
transfer matrix

TP, FP, FN,
TN per cell;
precision,
recall, F1,
balanced accuracy,
MCC, AUROC

Directional
partitions;
Wilcoxon,
Welch, Holm;
bootstrap CIs
